

GREYMOUTH GAS

**Consultation on a Standard Exemption Application
under the Gas (Downstream Reconciliation) Rules
2008: Kupe Delivery Point**

Submissions close 26 January 2010

Greymouth Gas New Zealand Limited (Greymouth Gas) supports the above application (the application) for the reasons set out in the application.

As an aside, the first sentence under the heading 'Additional Information' on page 2 of the application says that *the Kupe gas gate is a delivery point for the Kupe gas field into the Vector transmission system*. Although not material to the application, we note that this statement is incorrect because any gas coming into the Vector Transmission System from outside that transmission system must come from a Receipt Point.
