Dear Bas

Powerco submission on Options for the Governance of Retail Contract Terms

Powerco Limited ("Powerco") welcomes the opportunity to comment on the Gas Industry Company's ("GIC") consultation paper *Options for the Governance of Retail Contract Terms*, published on 5 October 2009.

Powerco is broadly supportive of the GIC's proposals in this area, especially action that promotes best practice and strengthens the New Zealand gas industry. We welcome the GIC's efforts to complete cost benefit analysis on the options and these results should drive decision-making. Based on the evidence provided in the paper, the GIC's recommendation to initially follow a voluntary approach for 18 months, followed by targeted regulation where necessary, seems appropriate.

In this submission, we have generally only commented on areas that directly impact distribution (eg, issues such as consumer safety, disconnections/connections, faults, emergencies and planned shut downs). Powerco however, often receives feedback from consumers on their gas services, and where relevant we have mentioned these issues. For example, some consumers on private networks have raised concerns related unpublished individual terms and conditions in their contracts. Effectively, where termination clauses exist, consumers are left with little choice or power. The GIC's current proposal however, is to only monitor published standard terms.

We are concerned that this loop hole will incentivise retailers to move more customers to unpublished non standard terms. Powerco believes the simplest approach to achieve consistency in this area is for the GIC to state all consumers under 10TJ are to receive the same application by retailers of these benchmark terms. To monitor this, the GIC could request that retailers submit examples of their individual terms to the GIC for review.

Powerco's response to the GIC's questions is attached. If you have any further questions please contact Martyn Dudley on 04 978 0533.

Yours sincerely

Paul Goodeve

Regulatory and Business Manager

Response to GIC's Questions

(Powerco has not included responses to questions where we have no comment)

Question	Comment
Q1: Do you agree with the proposed	The primary outcome in the Government Policy
regulatory objective? If you disagree	Statement (GPS) is that "contractual arrangements
explain why, and give an alternative	[] adequately protect the long term interests of
formulation.	small consumers". Powerco recommends that the
	concept of protecting consumers' interests is
	specifically included in the regulatory objective.
Q2: Do you agree that the evidence	Powerco notes the Commerce Commission's
available supports some degree of	statement in the discussion paper that "there is
structured oversight of the quality of retail	evidence that some retailers do not have acceptable
contract terms? If you disagree explain	contracts, and those retailers account for an
why.	appreciable proportion of retail gas", and that the
	GIC's analysis has provided further support for this
	statement. This seems appropriate grounds to
	consider regulation, subject to cost benefit analysis
	of the proposals.
	In our operations, we have come across consumers
	who have unknowingly become locked into contract
	roll over and would like this to be addressed. This
	type of clause seems unique to New Zealand and
Q3: Do you agree the 'benchmark' terms	against promoting competition. Powerco supports the approach that has the
for retail contracts should be selective and	strongest cost benefit justification. We agree with
outcome based rather than comprehensive	the GIC proposals, as a selective approach with
and prescriptive? If you disagree explain	targeting seems more likely to be inline with this

approach.	тап а сотпртененого арргоаст.
Q4: Do you agree the focus of governance	The norm on open access networks is to provide a
on retail contracts should be the bundled	bundled service, so it seems appropriate to focus
service (gas, metering, transport) received	the governance of retail contracts on this.
by consumers?	We note that the focus on bundled networks would
	exclude direct contracts between distributors or
	metering owners with consumers. We provide more
	detail on this in response to question 5.
Q5: Are you aware of any instances in the	Cases exist on public distribution networks where
gas industry of consumers having direct	meter owners or distributors have direct contracts,
contracts with meter owners or	although these tend to be larger users. In Powerco's
distributors? If so, how should these	experience we have found it relatively common
contracts be governed?	place for private networks to intertwine retail and
	distribution contract terms and conditions. In some
	cases a retailer has imposed a longer distribution
	contract term than the retail contract term. It
	therefore is essential for consumers to be just as
	protected on private networks as they will be on
	public networks, noting the GIC mandate for

	creating a competitive market with real choice for consumers.
Q6: Do you agree with the analysis of the need for and scope of benchmark terms relative to consumer expectations? If not explain why. Q9: Are the benchmark terms proposed for 'changes to a contract' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	In terms of scope, Powerco stresses the importance of safety in gas operations. While safety is mentioned in consumer expectation 6, "the supply of gas is safe, reliable, and 'fit for purpose', it is not carried through adequately into the benchmarks. Powerco recommends that an additional part is added, where the consumer must be told which clauses are being changed, altered, added or removed.
Q11: Are the benchmark terms proposed for 'prices, bills and payment' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	To support the customer expectations (a) "a supplier does not impose additional or unexpected costs on consumer" and (b) "bills are easy to understand", Powerco supports the disclosure of key components of a gas bill. Customer feedback to Powerco indicates that customers are confused as to what price increases relate to (eg energy, line, metering etc.) It seems better information is needed.
Q13: Are the benchmark terms proposed for 'obligations of the parties in relation to supply to the site and access' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	The GIC has included the statement that "standards must comply with the Gas Act 1992 and the technical regulations and technical gas codes of practice". We note that in the future there may be other relevant regulation. Powerco recommends the benchmark is reworded so that service standards comply with all relevant legislation.
Q15: Are the benchmark terms proposed for 'metering' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	Powerco supports the terms and notes that in most cases retail contract terms will mirror those in the Gas Act, other regulations and in the Network Services Agreement between retailers and distributors.
Q16: Are the benchmark terms proposed for 'disconnection and reconnection' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	Powerco agrees with the GIC that the issues on disconnection and connection between retailers and distributors should not be addressed by this programme of work.
Q17: Are the benchmark terms proposed for 'faults and planned shutdowns' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details.	Powerco supports the inclusion of "unless agreed with the consumer" on 9.1(b) on minimum notice periods for planned shutdowns. We note that the Commerce Commission has set minimum notification periods for Powerco's planned interruptions. For an interruption to be classed as planned, Powerco must give retailers at least 10 business days notice or as otherwise arranged with end customer. Consequently the current wording

Q20: Are the benchmark terms proposed for 'dispute resolution' appropriate? If not please explain why. If an alternative form of words or an additional clause is suggested, please provide details. Q23: Viewing the proposed benchmarks as a whole, are there topics which should have been included and have not, or are there terms which have been included but might be removed to make the benchmarks more compact? Give reasons for any views expressed, and examples where appropriate. Q24: Should the benchmarks be extended or amended to prevent the use of such unfair conditions, or would another approach be more appropriate?	Powerco recommends the benchmarks include a provision that network and metering companies etain access to their equipment under current egislation for emergencies, safety disconnections and repairs. Powerco reiterates its support for the Electricity and Eas Complaints Commission ("EGCC") as the most appropriate vehicle for complaints resolutions and support its inclusion in the terms. Please see Powerco's response to question 6.
