Nova Energy

Nova Energy supports the amendments proposed by Firstgas to the critical contingency management plan under the Gas Governance (Critical Contingency Management) Regulations 2008.

Papakura Power

Broadlands Biomethane has requested that the pressure in it's lateral be reduced so that it can avoid compression costs.

Papakura Power has also requested that the pressure in it's delivery lateral be reduced.

Can FirstGas/GIC please advise how these requests are processed any why it seems that some parties get priority?
